

Pressing Process Optimization

Technological Check for MDF plants

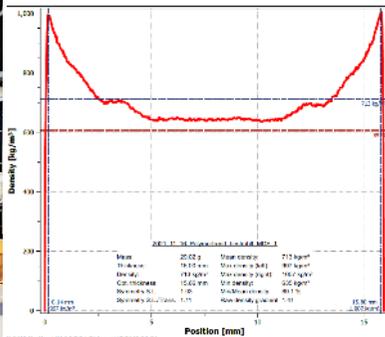

Fine-tune your pressing process for more efficient production. Starting with in-depth analysis, our technologists help you optimize your pressing process. This includes, for example, controlled belt tracking, press program analysis, and temperature and gas pressure measurements. Last, we'll review the results with you and discuss your optimization potential.

Product highlights

- Detailed press check
- Belt alignment optimization
- Temperature/press-curve analysis
- Raw material check
- Optional remote concept
- Final report with documentation
- Review of optimization potential

Customer benefits

- Higher production speed
- Higher output
- Increased board quality
- Fewer rejects
- Raw material savings (glue, wood, energy)
- Higher efficiency
- Less downtime

Price
< 10.000 €

Duration
6 Days

Downtime
1 day, if inevitable

About our Technological Optimization Packages

Based on an in-depth data analysis, our experienced technologists will review specific sections of your production process. Each check starts with a joint kickoff meeting and checklist-based preparation. Accordingly, your equipment, process and required parameters will be analyzed in depth. This evaluation may include, for example, the analysis of raw material or board samples in Dieffenbacher's technology center. Finally, our experts will discuss their findings with you, recommend actions for optimization and provide you with a detailed report.

The numbers mentioned in this flyer are estimates and may vary in each individual case. Prices do not include travel and accommodation cost.
