

Strand Geometry Optimization

Technological Check

Assure optimal strand geometry to help achieve high-quality OSB. Our technologists perform a detailed analysis of all factors influencing strand geometry. This includes, for example, strand orientation measurements and a settings check for all machines involved. Last, we'll review the results with you and discuss your optimization potential.

Product highlights

- Strand orientation measurement
- Strand and board analysis in our lab
- Check of chipping equipment and settings, e.g., for flakers, screens and dryers
- Optional remote concept
- Final report with documentation
- Review of optimization potential

Customer benefits

- Higher board quality due to desired sizes and fewer contaminants
- Capacity increase possible
- Fewer rejects
- Less downtime due to reduced machine damage

Price
< 5.000 €

Duration
4 days

Downtime
0 days

About our Technological Optimization Packages

Based on an in-depth data analysis, our experienced technologists will review specific sections of your production process. Each check starts with a joint kickoff meeting and checklist-based preparation. Accordingly, your equipment, process and required parameters will be analyzed in depth. This evaluation may include, for example, the analysis of raw material or board samples in Dieffenbacher's technology center. Finally, our experts will discuss their findings with you, recommend actions for optimization and provide you with a detailed report.

The numbers mentioned in this flyer are estimates and may vary in each individual case. Prices do not include travel and accommodation cost.
